Built on Ethereum

Nickelium

Nickelium is a digital token that represents ownership of 100g of nickel, combining the stability of physical commodities with the flexibility of cryptocurrency through a unique price formula based on actual nickel market values.

[Trade Nickelium](#)

The future of digital currency now.

STABLE & transparent

Nickelium aims to provide stability and trust in the volatile world of crypto, ensuring that each token is backed by geo labs synthetic assets.

Valued like ivory & gold

Nickelium's golden formula is designed around the greek number ϕ – the golden section- to enhance its value and volatility.

Eco conscious

We work with lead scientists to transform in-situ nickel reserves into synthetic back up assets for the production of our tokens.

THE FUTURE TRADE TODAY

▼
A stable coin based on Nickel

Nickelium Labs transformed real Nickel reserves into synthetic assets to back up its tokens. To achieve that Nickelium Labs engaged with European Universities to create five synthetic mines based on the JORC Technical Format.

➤ Global reserves tokenisation

→ A token with its own platform

➡ Fast, secure, low fee transactions

Implemented on the golden formula (φ)

BUILT IN GROWTH MECHANISM

METAL ALONE. BEYOND THE BASE NICKEL PRICE, ENSURING YOUR INVESTMENT GROWS FASTER THAN THE THE FORMULA USES THE GOLDEN RATIO (1.618) TO CREATE EXPONENTIAL VALUE GROWTH

DUAL VALUE PROTECTION

GROWTH OPPORTUNITY IN ONE ASSET.PREMIUM PROVIDES ADDITIONAL UPSIDE POTENTIAL – GIVING YOU BOTH STABILITY AND BASE VALUE IS TIED TO PHYSICAL NICKEL (100G PER TOKEN), WHILE THE CRYPTO

MATHEMATICAL CERTAINTY

CREATING PREDICTABILITY IN AN UNPREDICTABLE MARKET.TRANSPARENT MATHEMATICAL FORMULA THAT ANYONE CAN VERIFY, UNLIKE ARBITRARY TOKENOMICS, NICKELIUM'S VALUE IS DETERMINED BY A

How it works

Physical Mines

Real-world nickel deposits verified by geological surveys, where Nickelium secures rights to the metal without immediate extraction.

• Real mines with verified nickel reserves

- Technical analysis, measured reserves and environmental study

- Physical exploitation with full exploitation as per license

Synthetic Mines

AI-generated models of nickel deposits created from actual drill data, allowing for tokenization without any physical mining activity.

• Synthetic mines with verified nickel reserves

- Training of synthetic data algorithm, creation of mines

- Tokenisation of Reserves and issuance of crypto tokens

Nickelium transforms nickel reserves from physical mines into synthetic assets
Each NCL token represents 100g of nickel
The token price follows the “Golden Formula” based on LME nickel prices
Users can trade NCL tokens instantly without moving physical metal
The dual-mine approach ensures sufficient backing while minimizing environmental impact
